Story Telling:

The Story of Steve Jobs

Script:**Salsa:**

“Good morning everyone.

Today, we would like to tell you the inspiring story of Steve Jobs, one of the most influential people in the world of technology.

Steve Jobs was born on February 24, 1955, in California, United States. He was adopted by a working-class family who supported his curiosity and creativity from a young age.

As a teenager, Steve loved electronics and technology. He spent a lot of time learning how machines worked and exploring new ideas.

Although he was intelligent, Steve did not enjoy formal education very much. He entered college but dropped out after only six months because he felt it was not the right path for him.

However, dropping out of college did not stop him from learning and following his passion.”

Prasetio:

“In 1976, Steve Jobs and his friend, Steve Wozniak, started a small company called Apple in a garage.

At that time, computers were very expensive and difficult to use. Steve Jobs had a dream to create computers that were simple, beautiful, and easy for everyone.

Their hard work finally created the Apple I and later the Macintosh computer, which became very popular.

Steve Jobs believed that technology should connect with creativity and design. Because of his vision, Apple became one of the most innovative companies in the world.

People around the world started using Apple products in their daily lives.”

Ziyad:

“However, success did not always come easily.

In 1985, Steve Jobs was removed from Apple, the company he created himself. Many people thought his career was over.

But Steve did not give up.

He started a new company called NeXT and also helped develop animation movies with Pixar.

Years later, Apple was struggling and decided to bring Steve Jobs back to the company.

After returning, Steve introduced revolutionary products such as the iPod, iPhone, and iPad. These inventions changed the way people communicate, listen to music, and use technology forever.

Steve Jobs proved that failure is not the end of success.”

Rijal:

“Sadly, Steve Jobs passed away in 2011 because of pancreatic cancer.

But his ideas, creativity, and innovations continue to inspire millions of people around the world today.

One of his most famous quotes was:

“Stay hungry, stay foolish.”

This quote teaches us to keep learning, stay creative, and never be afraid to follow our dreams.

As students of technology and informatics, we can learn from Steve Jobs that success comes from passion, hard work, creativity, and courage.

Thank you for your attention, and we hope this story can inspire all of us to never stop innovating.”
